1. (6 %) Find $\frac{dy}{dx}$ if $y = e^x$. 

2. (8 %) Byzantium decays at a rate proportional to the amount present. The half-life is 500 years. What fraction of the original amount is present after 250 years? 

3. (6 %) Find $\frac{dy}{dx}$ if $y = \ln(x + \ln(x))$. 

4. (6 %) Find $f(x)$ if $f'(x) = x^4 + 3x^2 + 1$ and $f(0) = 2$. 

5. (6 %) Let $k(x)$ be the inverse of the function $f(x) = x^5 + x$. What is $k'(2)$? 

6. (6 %) Find $\frac{dy}{dx}$ if $y = \frac{1}{1 + \arctan(x)}$. 

7. (6 %) Find $\lim_{x \to 0} (1 + 2x)^{\frac{3}{x}}$. 

8. (6 %) Find $\lim_{x \to \infty} (\ln(x))^3$. 

9. (8 %) Two corridors, one 6 meters and the other 3 meters wide, meet at a right angle. A calculus instructor wants to wheel a flat portable blackboard around the corner. How long can the black board be? 

10. (4 %) The function $g(x)$ on the interval (1,8) has both a first and second derivative at every point. Find the intervals where $g'(x)$ is positive, $g'(x)$ is negative, $g''(x)$ is positive, and $g''(x)$ is negative. 

11. (4 %) Draw the graph of a function $f(x)$ such that $f'(x)$ is positive on the intervals (1,2) and (3,4) and negative on the interval (2,3). 

12. (4 %) Draw the graph of function $f(x)$ such that $f''(x)$ is positive on the intervals (1,2) and (3,4) and negative on the interval (2,3). 

Multiple choice and True-False circle your answer. (1 point each)
13. Suppose \( f(x) = \theta \) is the inverse function of \( x = \sin(\theta) \) restricted to \([\pi/2, \pi]\). (Warning this is not the usual interval.) What is \( f'(x) \)?
   a. \( \arcsin(x) \)
   b. \( \arcsin(x) + C \)
   c. \( \sqrt{1-x^2} \)
   d. \( \frac{-1}{\sqrt{1-x^2}} \)
   e. \( \cos(x) \)
   f. none of above

14. \( \sin(\arcsin(\frac{7}{4}\pi)) = ? \)
   a. \( \frac{7}{4}\pi \)
   b. \( -\frac{1}{4}\pi \)
   c. \( \frac{1}{4}\pi \)
   d. undefined
   e. none of above

15. The derivative of \( \log_{2}(x) = ? \)
   a. 1
   b. \( x \)
   c. 0
   d. undefined
   e. none of above

16. If \( f \) is twice differentiable on \((a, b)\), \( a < c < b \), \( f'(c) = 0 \) and \( f''(c) > 0 \) then
   a. \( f \) has an inflection point at \( c \).
   b. \( f \) has a local minimum at \( c \).
   c. \( f \) has a local maximum at \( c \).
   d. \( f \) may have a saddle point at \( c \).
   e. none of above.

17. (True or False) If \( f \) is a continuous function on \([a, b]\) and differentiable on \((a, b)\) and \( f'(a) = f'(b) \), then \( f(c) = 0 \) for some \( c \) with \( a < c < b \).

18. (True or False) If the derivative of a function is always positive then the function cannot have an inflection point.

19. (True or False) If \( f(x) = x^3 + x + 1 \) then there must be a real number \( c \) with \( 0 < c < 1 \) such that \( f'(c) = 2 \).

20. (True or False) Suppose \( g'(x) > 0 \) on an interval \((a, b)\) then \( g(x) \) is a decreasing function.

21. (True or False) If an interval contains three distinct zeros of a twice differentiable function then it also contains a zero of the function’s second derivative.
22. (True or False) A continuous function $f$ on an interval $(a, b)$ must achieve its extreme values (minimum and maximum).

23. (True or False) Between any two zeros of a differentiable function lies a zero of its derivative.

24. (True or False) If $f(c)$ is the minimum value of a differentiable function $f$, then $f'(c) < 0$.

25. (True or False) $\lim_{x \to 3} \frac{x - 3}{x^2 - 3} = \lim_{x \to 3} \frac{1}{2x}$ by using L'Hôpital's Rule.

26. (True or False) Suppose $g'(x) = 0$ for all $x$, then $g$ is a constant function.

27. (True or False) If $f'(x) = 2x$, then $f(x) = x^2$.

28. (True or False) If $f(x) = g(x)$ for all $x$, then $f'(x) = g'(x)$ for all $x$.

29. (True or False) If $f'(x) = g'(x)$ for all $x$, then $f(x) = g(x)$ for all $x$.

30. (True or False) If $f(x) \neq g(x)$ for all $x$, then $f'(x) \neq g'(x)$ for all $x$.

31. (True or False) If $f''(x)$ is positive on the interval $(a, b)$, then the function $f'(x)$ is increasing on the interval $(a, b)$.

32. (True or False) There exist two nonconstant functions $x$ and $y$ of $t$ such that $\frac{dx}{dt} = y$ and $\frac{dy}{dt} = x$.

33. (10 %) Prove the mean value theorem. If a function $f$ is continuous on $[a, b]$ and differentiable on $(a, b)$ then there exists a $c$ with $a < c < b$ and

$$f'(c) = \frac{f(b) - f(a)}{b - a}.$$ 

You may use Rolle's Theorem without proof, but if so, you must correctly state it and check that it applies.
Answers

1. $e \cdot x^{e-1} \cdot e^x$
2. $0.707107$
3. $\frac{1}{\ln(x)} \cdot (1 + \frac{1}{x})$
4. $f(x) = 2 + x + x^3 + \frac{x^5}{5}$
5. $\frac{1}{5}$
6. $\frac{-1}{(1+(\arctan(x))^2)} \cdot 2 \arctan(x) \cdot \frac{1}{1+x^2}$
7. $e^0$
8. $0$
9. $\theta_0 = \arctan(\sqrt{2})$ and $B = \frac{6}{\sin(\theta_0)} + \frac{3}{\cos(\theta_0)}$
10. $g'(x)$ is positive: $(1, 2), (4, 6)$, $g'(x)$ is negative: $(2, 4), (6, 8)$, $g''(x)$ is positive: $(3, 5), (7, 8)$, and $g''(x)$ is negative: $(1, 3), (5, 7)$.
